

**AZ Vocabulary**

1. You can measure length in **inches**, **feet**, and **yards**.

If you use smaller **units**, you need to use more.

12 in. = 1 ft

The bat is about \_\_\_\_\_ inches long.

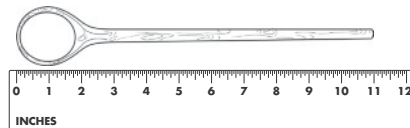

The bat is about \_\_\_\_\_ feet long.

It takes fewer units of \_\_\_\_\_ to measure the length of the bat.

2. Use different units to measure the length of a mixing spoon.

This mixing spoon is about

11 inches long.

Or you can say it is about

1 \_\_\_\_\_ long.

You need more units of inches than feet to measure the length of the spoon.

This is because inches are \_\_\_\_\_ than feet.

**On the Back!**

3. A fence is 5 yards long.

Does the same fence measure *more* feet or *fewer* feet than the number of yards? Explain.
